

INSTRUCTIONS :

Particulate Matter \leq 2.5 microns (**PM_{2.5}**)

Complete this form for PM_{2.5} emissions. This form is for sources which generate PM_{2.5} emissions (particulate matter with an aerodynamic diameter less than or equal to a nominal 2.5 micrometers), mostly from different types of manufacturing or production processes.

Be certain to accurately complete the Production/Process Type column. This column identifies the source of the PM_{2.5} emissions.

Report the throughput for the different production/process types and the PM₁₀ emissions that are emitted to the ambient air from each process. Report annual and average hourly values.

The column marked "Other" may be used for making references to codes, permits, etc.

This form may be photocopied, as required, to support reporting requirements.
