* Certifying individual must be a responsible company official, pursuant to LMAPCD Regulation 2.16, Section 3.5.11 once a Title V permit has been issued to the company. For all other permitted sources, the Signatory shall be an authorized person of the company.

INSTRUCTIONS

This form will satisfy the SAM reporting requirements for any small automotive refinishing operation, which can properly identify the low usage of Volatile Organic Compounds (VOCs).

- For companies consuming products containing Volatile Organic Compounds (VOCs), the simplest way of determining the quantity usage, would be by the inventory method. The Beginning Inventory of quantities at the start of the year, plus quantities purchased during the calendar year, less the Ending Inventory of quantities at the end of the year. If any VOC liquids were properly disposed of as waste, they could also be subtracted. This result will yield the quantity of product used during the emission reporting year.
- Please complete this form in its entirety.
- List the annual quantities used / produced next to the appropriate category, making sure to state the units of measure if the quantity is not stated in gallons. For compounds used, which are not listed; identify the material and the quantity used after "OTHER" at the bottom of the VOC column, or on a separate sheet of paper that is attached to this form.
- Be sure to properly identify the company with the Plant Name, along with the Plant ID number, which can be found on the upper right corner of the company mailing label. This form must be authorized and signed by the appropriate Company Official.
